### Changes That we made in our Requirements :

- We have removed relation between movies and crew.
- We have considered only Assistant directors as our crew team and established a new relation between assistant directors and directors.
- Established a new relation between character and actor and removed actors attribute from character. The cardinality ratios are |actors| --- (1,M) --- <act as> --- (0,N) --- |character|. Because animation movies donot have actors. In movies like c/o Kancharapalem and awe, many actors play single character. Single character can be played by multiple actors (childhood, adulthood etc).
- Added hit and flop attribute i.e derived attribute to movies entity and this attribute is derived from budget and collections attributes of Movies entity.
- Changed the lyrics attribute of songs entity from multivalued to normal.
- Changed the cardinality ratios of clash relation.
- Event is identified from the movie name, movie year and movie director.
